Sai Charan Reddy

7702188503 | saicharanreddyamedapu4@gmail.com | LinkedIn | GitHub | LeetCode

Summary

Computer Science student with hands-on experience designing, developing, testing, and deploying full-stack web applications. Skilled in Java, Spring Boot, React, RESTful APIs, SQL, and Git, with practical experience in backend development, frontend integration, database management, authentication, debugging, and cloud deployment. Strong problem-solving and analytical skills, with a focus on writing clean, maintainable, and scalable code. Eager to contribute to software development teams and build reliable, high-quality applications.

Education

Bennett University, Greater Noida
Bachelor of Technology in Computer Science — *Sep 2023 – Present*

Technical Skills

Programming Languages: Java, Python, JavaScript
Backend & APIs: Spring Boot, Spring Security, JPA (Hibernate), JDBC, Servlets, REST APIs, JWT Authentication
Frontend & Web: React, HTML, CSS
Cloud & Platforms: AWS (EC2, S3, EBS, IAM, VPC, CloudWatch, SNS), Linux
Tools: Maven, Docker, Eclipse, Selenium, Git, GitHub
Databases: MySQL, PostgreSQL
Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP)

Projects

Hirely – Job Platform — **GitHub** | **Live Demo**
Java, Spring Boot, PostgreSQL, AWS, React — *July 2026 – Present*

- Designed and developed a full-stack job platform supporting Candidate, Company, and Hiring Manager roles using a layered Spring Boot architecture and MapStruct for compile-time entity-DTO mapping.
- Implemented stateless JWT authentication, BCrypt password hashing, and role-based authorization using Spring Security, with a Factory-pattern UserDetailsService for multi-role login.
- Modeled job postings, applications with status-stage tracking, skills, and company reviews using PostgreSQL, Spring Data JPA, and Hibernate, with HikariCP connection pooling.
- Built asynchronous email notifications and resume uploads with Apache Tika MIME-type validation; deployed the backend on AWS EC2 and the React frontend on Vercel.

Task Tracker — **GitHub**
Java, Spring Boot, PostgreSQL, React, Vite — *April 2026*

- Developed a full-stack task management application with a Spring Boot 3 REST API, React/Vite frontend, and PostgreSQL database for persistent storage.
- Implemented user registration and login with Spring Security and modeled task ownership through Spring Data JPA relationships between users and tasks.
- Designed RESTful APIs supporting CRUD operations, user-specific task retrieval, deadline tracking, and completion status management.

Parking Lot System (Low-Level Design) — **GitHub**
Java, OOP, Design Patterns, Multithreading — *March 2026*

- Designed and implemented an object-oriented parking lot system supporting multiple floors and vehicle types, including bikes, cars, and trucks.
- Applied Strategy, Factory, and Singleton design patterns to implement flexible pricing, payment methods (UPI, Card, Cash), object creation, and centralized parking lot management.
- Simulated concurrent vehicle entry and exit using multithreading, generating parking tickets on entry and calculating fares on exit based on configurable pricing strategies.
